

In this Lecture we will

- Look at the concept of field validation
 - required field validator
 - range validator
 - regular expression validator
 - need to add lines below to web.config for validation controls to work in newest VS Editions

- `<appSettings>`

- `<add key="ValidationSettings:UnobtrusiveValidationMode"`
`value="None"/>`

- `</appSettings>`

- Create a program to illustrate the concepts above
 - ***ValidatedCustomerForm***
